

## RGE Tech Tips from the Field – Client Edition

*Topic: Taking Better Photos with Your Phone*

Chip's Weekly Cheat Sheet: Mar-23 🇺🇸

Topic: Taking Better Photos with Your Phone

### 1. The "Clean Lens" Secret

- Our phones live in pockets and purses. A quick wipe of the camera lens with a soft cloth removes the "haze" from your photos instantly.
- **Chip's Tip: If your photos look "dreamy" or blurry, it's usually just a fingerprint on the lens!**

### 2. Tap to Focus (and Light)

- Before you hit the shutter button, tap the person's face on your screen. This tells the camera exactly where to focus and how much light to let in.
- **Chip's Tip: After you tap, look for the little "Sun" slider that appears—you can slide it up or down to brighten the photo.**

### 3. Stabilize for Sharper Shots

- In low light, any small hand movement can cause blur. Lean your elbows against your ribs or rest the phone on a table to keep it still.
- **Chip's Tip: Using the "Timer" setting (even just 3 seconds) lets you press the button and then hold the phone steady before it fires!**
