

## RGE Tech Tips from the Field – Client Edition

Topic: Gemini vs. ChatGPT -- Which Brain Should I Use

Chip's Weekly Cheat Sheet: Jul-13 🤖

Topic: Gemini vs. ChatGPT: Which "Brain" Should I Use?

### 1. Gemini: The Google Expert

- Because it is built by Google, Gemini is the master of "doing." It can look into your Gmail to find a flight, check your Google Calendar, or find a specific photo from 2024.
- **Chip's Tip: Use Gemini if you want help with things you already have stored in Google—it's like a personal assistant for your digital life.**
- 

### 2. ChatGPT: The Creative Writer

- ChatGPT is world-class at "creating." It is excellent for drafting letters to a landlord, writing a funny poem for a birthday, or explaining a complex history topic like a friendly teacher.
- **Chip's Tip: Use ChatGPT when you have a "blank page" problem and need someone to help you start writing.**
- 

### 3. The Best Tool for the Job

- At Red Glen, we recommend keeping both "bookmarks" on your computer. They are both free, and sometimes getting a "second opinion" from a different AI can help you find the perfect answer.
- **Chip's Tip: No matter which one you use, treat them like a helpful librarian—don't share your Social Security number or private passwords with them!**
